PROFILE

I like to work on distributed systems using agile and XP practices. My favorite approach to work is dipping my fingers in every pie and helping co-workers solve their problems. Most of my web work has been in Ruby on Rails, and I enjoy the core web technologies of HTML, CSS, and JavaScript. I also gravitate to the other side of the stack, setting up repeatable, consistent server environments that are fully automated and continuously deployed.

EXPERIENCE

Staff Engineer, One Medical; San Francisco, CA   2018 Present
- Created a service to ingest enterprise client eligibility files
- Quickly built tools for enterprise clients to support a return to work during COVID-19.

Senior Software Engineer, One Medical; San Francisco, CA   2015 2018
- Introduced improved continuous deployment and operations systems
- Migrated infrastructure to self-hosted, private networks in AWS
- Created and maintained several open-source projects
- Integrated with clinical data providers and systems using HL7 and C-CDA

Software Engineer, Cloud Ops, Pivotal; San Francisco, CA   2014 2015
Operated Pivotal Web Services, the publicly-accessible hosted Cloud Foundry installation (http://run.pivotal.io).
- Built tools to monitor and maintain our infrastructure
- Worked with each software team on how to integrate their software

Software Engineer, BOSH, Pivotal; San Francisco, CA   2014
An open source tool chain for release engineering, deployment and lifecycle management of large scale distributed services (http://bosh.io).
- Helped rewrite core components in Go

Software Engineer, Pivotal Labs; San Francisco, CA   2013 2014
Rapidly developed quality software for clients while training them in our process.

Software Engineer, Cerner Corporation; Kansas City, MO   2008 2013
- Rapidly prototyped and built Rails applications and taught other teams the same
- Drove adoption of best practices and helpful libraries for a team of 50+ developers

EDUCATION

Kansas State University, Manhattan, KS — B.S. Computer Science, 2009
